Claim 1; Page 86-87; 106pp; English

The present sequence is the coding sequence for Murine Lymph node Stromal cell kinase 1 (MLSK-1). The protein encoded by the present sequence is useful for treating a variety of disorders listed in the disclosure of the specification, including autoimmune disorders, allergic reactions, myeloid or lymphoid cell deficiencies, wound healing and tissue repair and replacement, burns, incisions and ulcers, periodontal disease, incisions and bacterial, viral or fungal infection inflammatory diseases, tumours and bacterial, viral or fungal infection

The invention relates to an AMPK (AMP-activated protein kinase) related kinase, designated SNARK polypeptides and polynucleotides. SNARK (SNIF/AMP-activated protein Kinase) is involved in stress response to glucose deprivation. The polynucleotides are useful for expressing SNARK protein in isolated form or as a protein conjugate. Activation of SNARK primates liver CPT-1 thus enhances lipid metabolism in liver cells and in other cell types such as heart and skeletal muscles, as well as increases GLUT-4 and glycogen in muscle. Activation of SNARK is predicted in chave insulin-like effects that would enhance the disposal of glucose into muscle and reduce plasma glucose for the treatment of diabetes and some type of disorders of lipprotein production leading to increased come type of disorders of lipprotein production leading to increased come type of disorders of triglycerides. SNARK or its variants may be administered to a subject to treat or prevent a disease associated with decreased expression of SNARK, such as disbetes. SNARK antibodies are used to modulate SNARK activity either in vivo for therapeutic purposes. SNARK antagonists may be administered to increase fuel production. SNARK antagonists may be administered to increase fuel production. Charactes of processing of the present sequence is rat SNARK CDNA suffering from hypoglycaemia. The present sequence is rat SNARK CDNA

```
An area of a state of a modulation of a movel indiant process.

Kinase designated 3700, and the polymuclectide sequence encoding it. The invention also describes the use of a medulator of the activity of protein kinase (PK) 3700 for making a medicament or pharmaceutical composition for modulating the ability of a cell to phosphorylate an amino acid residue of a substrate protein. Modulators of protein kinase 3700 activity are useful for modulating protein phosphorylate on a ginalling, tumourigenesis, mitogenesis, transcription of a gene, angiogenesis, tissue repair, tissue regeneration, establishment or propression of atheroselerosis, and signalling across the blood-brain barrier. The polymucleotide and polymeptide molecules for protein kinase 3700 may be used as diagnostic targets and therapeutic agents for curing pk-related disorders and cellular proliferative and/or curing pk-related disorders and cellular pholyficing, alleviating, or differentiative disorders and cellular pholyficing, and sion conting pk-related disorders and cellular pholyficing across and cellular polymucleotide sequence can be used to express protein kinase 3700 to detect a genetic alteration in a 3700 gene, in chromosome mapping, for transcrent typing, in forensic plology, and as surrogate markers. The present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cracricarirccicreccerrectrocrecrecrecerrecenseagreerrec 175
